DRIVING INNOVATION AND SUSTAINABILITY THROUGH GREEN PROJECTS

“Utilising technologies developed in the 21st century, to provide innovative, environmentally friendly and financially viable solutions for projects”

January 2025

Confidential

Green Coin Tech - The Opportunity

- The Green Coin Tech “GCT” crypto currency is launched as a DAO community platform, focused on growing the community involved with raising capital for real world **GREEN** projects. The projects planned for establishment will utilise 21st century technologies, to ensure they are environmentally friendly, energy and cost efficient in operation, to return excellent economic viability.
- CJL Consulting is a project management company that has **Re-Fi** (Regenerative Finance) **GREEN** projects under review within **The Green Group** (www.greengroupmu.com) that require capital for establishment. Projects include major infrastructure, agriculture, manufacturing, mineral mining, rehabilitation, waste management, wastewater management, small scale clean power generation and natural medicinal products.
- The GCT primary focus is to simplify the process of entry to the GCT project community, by providing a low-risk digital platform for those interested in discovering both the crypto and technology space, the available financial returns and understanding the GCT link between the two sectors.
- GCT may be the **first** crypto, where purchasing the coin will give coin holders access into real world projects, which could create a stable coin, linked to stable coin trading platform, providing a solid annual ROI (Return on investment) and substantially increasing the value of the coin over time.
- Once the “Liquidity Pool” (LP) in GCT meets a project capex requirement, the project will be offered to the community and coin holders who upon acceptance to be involved, can move the coin value into the project. The **GREEN** projects will motivate the change required for a better, **GREENER** future and create one of the most sought-after crypto investments available worldwide.

Green Coin Tech – GCT Development Process

- The GCT has been deployed on the Sepolia Ethereum Test Network and is now deployed on the Live Ethereum Network
- GCT is listing on several international crypto exchanges starting with several DeFi and Refi platforms like Uniswap, Sushi Swap, Binance, CoinGecko etc.
- To create liquidity the coin will be launched as a “Fair Value” combined IDO (Initial Dex Offering) IEO (Initial Exchange Offering) and IGO (Initial Governance Offering), upon registration can then be purchased and swapped to increase value
- Only 500 million GCT’s will be issued and deployed on the various trading platforms as per GCT Tokenomics
- GCT/ETH staked for 12 months into a project, will immediately become unavailable for trading once transfer into the project wallet is completed, increasing scarcity and the value of GCT
- All profits being returned from a project will be paid back into the “Liquidity Pool” and can be then acquired by the LP stakeholders by way of coin value increase

GCT - Front View

GCT- Rear View

Green Coin Tech – Investment Process

- Preferential listing (IDO) of **GCT** offered to entry level investors when trading of **GCT** commences “Going Live” with registration on various DeFi and ReFi exchanges and trading platforms. Tokenomics allow for a GCT community to be established and rewarded in coin value for driving the focus of GCT.
- The **GCT** value will increase when traded on exchange platforms, based on the **GCT** liquidity pool value increase from **GREEN** projects ROI.
- Ownership of a single **GCT** allows the decision to move into a specific **GREEN** project, thus a single coin could be equated to a single share in a **GREEN** project.
- Individual “**GREEN** Project Wallets” will be created for each project capital injection into **GREEN** Projects
- Full disclosure of the proposed use of funds, project ROI at +/-40% PA is available on each project in a project feasibility report (See: website)
- Selling the coin from the **GCT** trading platforms can be undertaken at any time by a coin owner.
- Selling from a **GREEN** Project stake can only be undertaken without penalty once the project is established and operating.
- Only **GREEN** Project Wallets and associated coin holders will obtain ROI from the **GREEN** Projects this ROI is not available to **GCT** coin holders who did not stake into a **GREEN** projects.

Green Coin Tech – Tokenomics

- The Tokenomics of GCT are defined as follows:
 - ✓ **Ecosystem & Sustainability Funds:** 40% (200M tokens) – Allocated to green projects, carbon offsets, and partnerships.
 - ✓ **Liquidity & Exchanges:** 20% (100M tokens) – For market stability and trading pairs.
 - ✓ **Community Rewards & Airdrops:** 15% (75M tokens) – Incentives for eco-actions like staking or referrals.
 - ✓ **Team & Advisors:** 10% (50M tokens) – Vested over 3 years to promote long-term commitment.
 - ✓ **Marketing & Development:** 10% (50M tokens) – For promotion and tech upgrades.
 - ✓ **Private Sale/Seed:** 5% (25M tokens) – Early investors with lockups.
- All projects have a repayment of capex included in the project DCF at a 10% per annum interest rate. The repayment of capex and interest will be made back into the GCT project liquidity pool thereby possibly doubling the value of the coin over a 36-month capex repayment period

Green Coin Tech – Tokenomics

Green Coin Tech Token Distribution Breakdown (%)

Green Coin Tech - Crypto Investment Profit Potential

- ✓ **Green Coin Tech** purchase price = Price at launch (Target \$1.00 = ETH 0.00035) + Transaction fee – (Once off Ethereum charges and network GAS fees – Register individual coin accounts – Site and trading management fees)
- ✓ 1st level profit based on expected increase in GCT value from LP value, trading and real time valuation upon launch
- ✓ Intrinsic value of GCT = Preferential launch IDO purchase price
- ✓ No other coin transaction fee charges will apply to GCT other than Ethereum Gas fees
- ✓ 2nd level profit based on US\$ exchange rate and increase in Ether coin value
- ✓ 3rd level of profit based on real time traded value of GCT
- ✓ 4th level of profit based on continued support of Green projects ROI of 40% back to GCT
- ✓ 5th level of profit based on the movement of capital through the crypto on various coin-based trading platforms
- ✓ Continued ROI from trading and income derived from projects

Green Coin Tech – GCT

- ✓ Initial Coin Offering (IDO) price
- ✓ Intrinsic value of Green Coin = Preferential launch purchase prescribed price
- ✓ Launch of Green Coin onto various trading platforms immediately increasing value from trading
- ✓ Five (5) potential levels of profit generation from ownership
- ✓ Level entry investment (IDO) with option to enter Green projects and obtain project ROI
- ✓ Separate Green Coin wallets for each individual project

Return On Investment (ROI) - Green Projects

- ✓ From staking GCT into Green projects
- ✓ Project capex backed by GCT trading and project performance
- ✓ Repayment of project Capex will be made back to GCT holders at prevailing interest rates
- ✓ 40% of project profits back to GCT holders LP
- ✓ **GREEN** Projects available to commence immediately
- ✓ Real GCT value based on initial IDO + Project ROI
- ✓ All projects proposed under CPR, BFS and business plan
- ✓ GCT backed by stable trading and project performance

GCT - Technical Facts..!!

- **GCT** utilises the open source Ethereum Network for operation and trading, all transactions within **GCT** are open and transparent. GCT is built on block chain technology, but the operation, protection and nature of the Ethereum open-source software platform is such that, protection of the data in **GCT** platform is the best available
- Every coin purchased by investors, that may be moved into project establishment are provided a unique **GCT** ID via a MetaMask account, from which all transactions can be tracked. No transaction can be undertaken from a **GCT** MetaMask Wallet without the account owner authorising the transaction (Like a bank account)
- Although **GCT** is a crypto currency, it is designed to have unique features, that few other available currencies in the world possess, with real life projects generating real time profit and supporting GCT with repayment of capex, as an additional ROI
- Only 500 million **GCT** will ever be issued, the plan to list **GCT** on trading platforms with DAO, open and transparent community operation allows GCT to meet all trading registration requirements with Ethereum and international trading platforms
- It is the intention of **GCT** to create a stable, value increasing crypto currency with a solid annual ROI, better than other stable coins, rather than a potential valueless crypto token built only on the value of the coin being traded
- **GCT** will meet all tax related requirements and compliancy on the various trading platforms and will clearly indicate where **GCT** and the investors responsibilities begin and end in this regard.

Green Coin – Management & Development Team

CJL Consulting: Driving Innovation and Sustainability led by Colin Lotter, is a dynamic force in engineering and sustainable development. With qualifications in both electrical and mechanical engineering, Colin brings decades of expertise and innovation to the table. His career began at Eskom's Tutuka Power Station in South Africa during the 1980s, where he gained a comprehensive understanding of coal-burning requirements in industrial and power generation boilers. This foundation sparked his passionate vision for advancing clean coal power generation and pioneering mine discard rehabilitation across sectors such as metals, vanadium, gold, iron, chrome, and coal.

Colin's vision goes beyond industry norms, focusing on establishing revolutionary **GREEN** projects and sustainable power generation solutions that address the urgent global demand for clean energy. With over 30 years of experience as a business owner, coupled with his deep understanding of electronics and emerging technologies like cryptocurrencies, Colin is spearheading initiatives like **GCT**. This innovative approach empowers individuals and communities while driving progress in renewable energy and environmental sustainability. Colin Lotter combines technical expertise, entrepreneurial spirit, and a commitment to making a tangible difference in people's lives, creating a future where innovation and sustainability go hand in hand.

Green Coin – Management & Development Team

Bianka Louw Co-Director | Environmentalist | Innovator. With over 15 years of experience in water sanitation, alternative natural medicines, and sustainable rehabilitation, Bianka is a dynamic leader committed to creating impactful solutions for a better world. A passionate environmentalist, she champions innovative approaches to industry challenges, particularly in agriculture and mining, where she integrates sustainability and forward-thinking strategies.

Bianka's leadership philosophy is rooted in empowering others—leading by example and fostering a culture where teams thrive and individuals reach their full potential. Her unwavering honesty, integrity, and drive to see others succeed make her a transformative force in any project. She is known for her adaptability, passion for continuous learning, and dedication to making meaningful change.

A firm believer in doing more and saying less, Bianka's hands-on approach and unique perspective align perfectly with the company's mission to revolutionize traditional practices. Her commitment to sustainable development and forward-thinking initiatives ensures that projects under her guidance not only achieve success but also contribute to a healthier, more sustainable planet.

Green Coin – Project Investment Overview

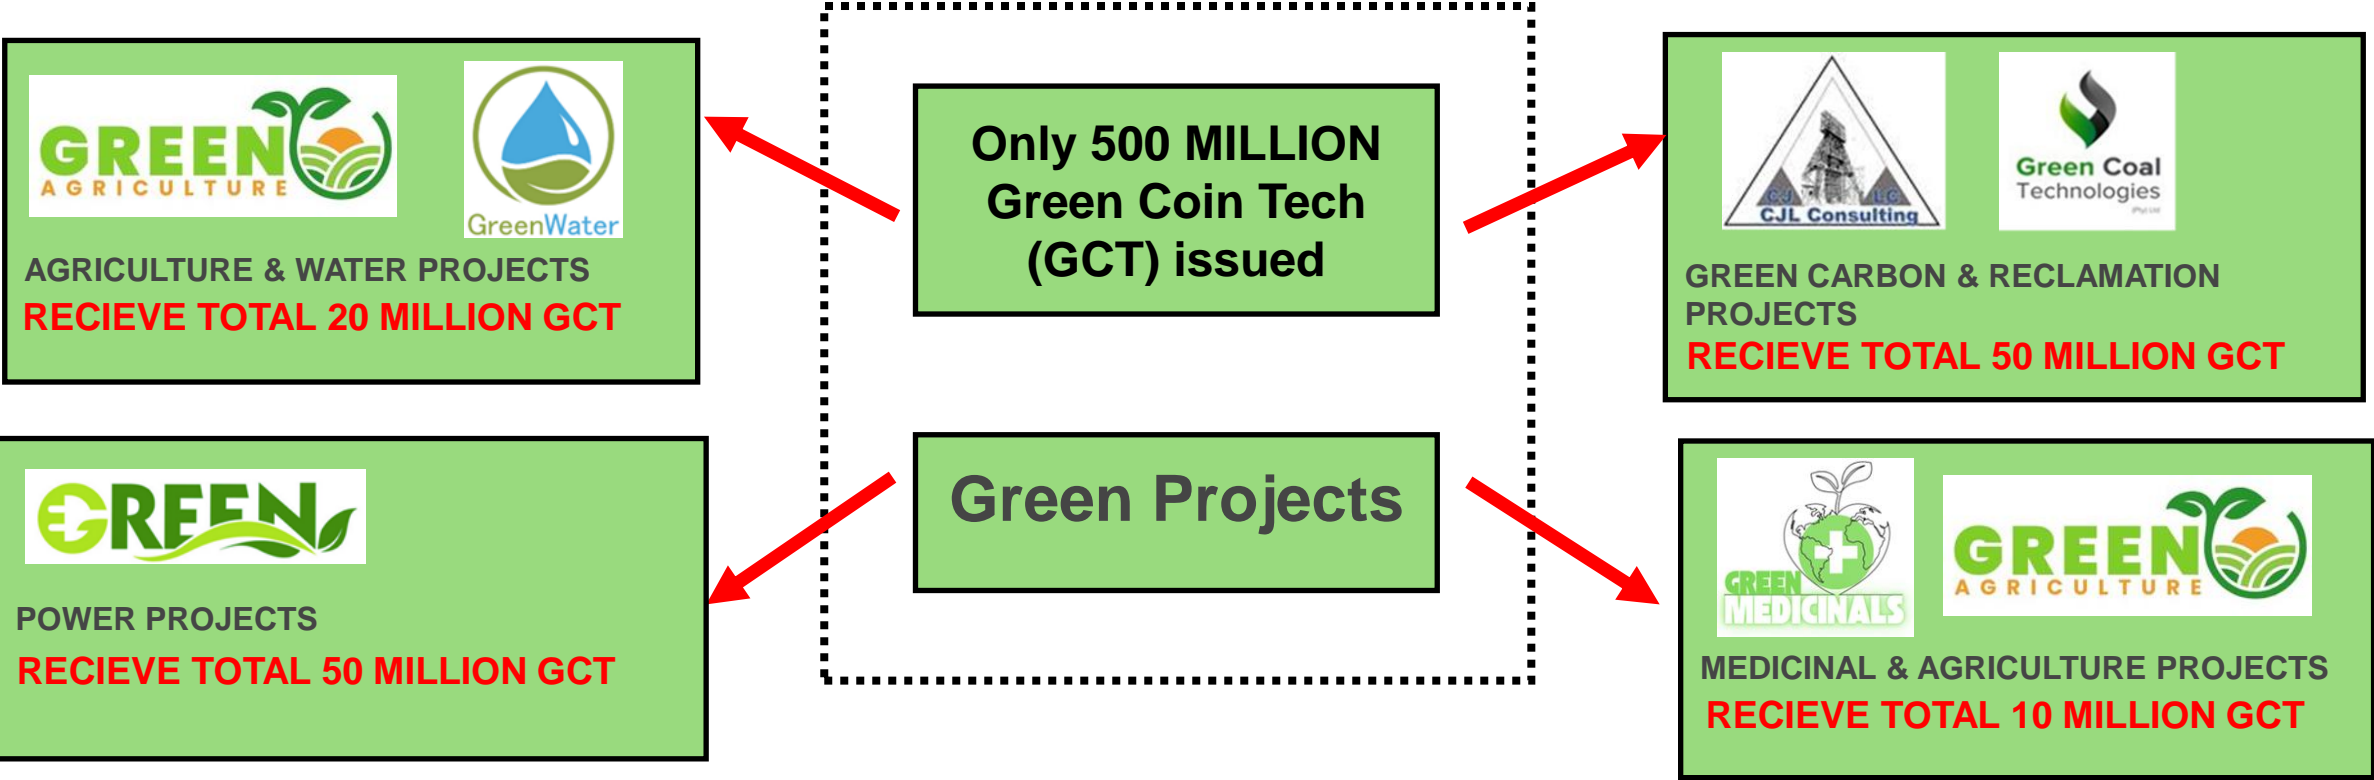

Several projects are available for investment by coin holders, spanning multiple sectors focused on sustainability and innovation:

- **Green Agriculture** – Self-sustaining activated charcoal manufacturing, organic hydroponic and aquaponic farming with minimum water and energy consumption, carbon credits guaranteed. Produce crops and products for **Green Medicinals** and public consumption.
- **Green Medicinals** – Organic cultivation of herbs and plants for natural medicinal product manufacturing.
- **Green Power** – Small-scale clean energy solutions for farming, mining and industry, including mechanical, wind, solar, and hydro projects. Also involves refurbishing inactive coal power stations with clean-burning **Green Power Tech** to reduce emissions.
- **Green Coal Technologies** – Environmental reclamation and clean coal production from mine discard. Supports small-scale power generation for mines and local communities.
- **CJL Consulting** – Specializes in project management and plant design for industry.

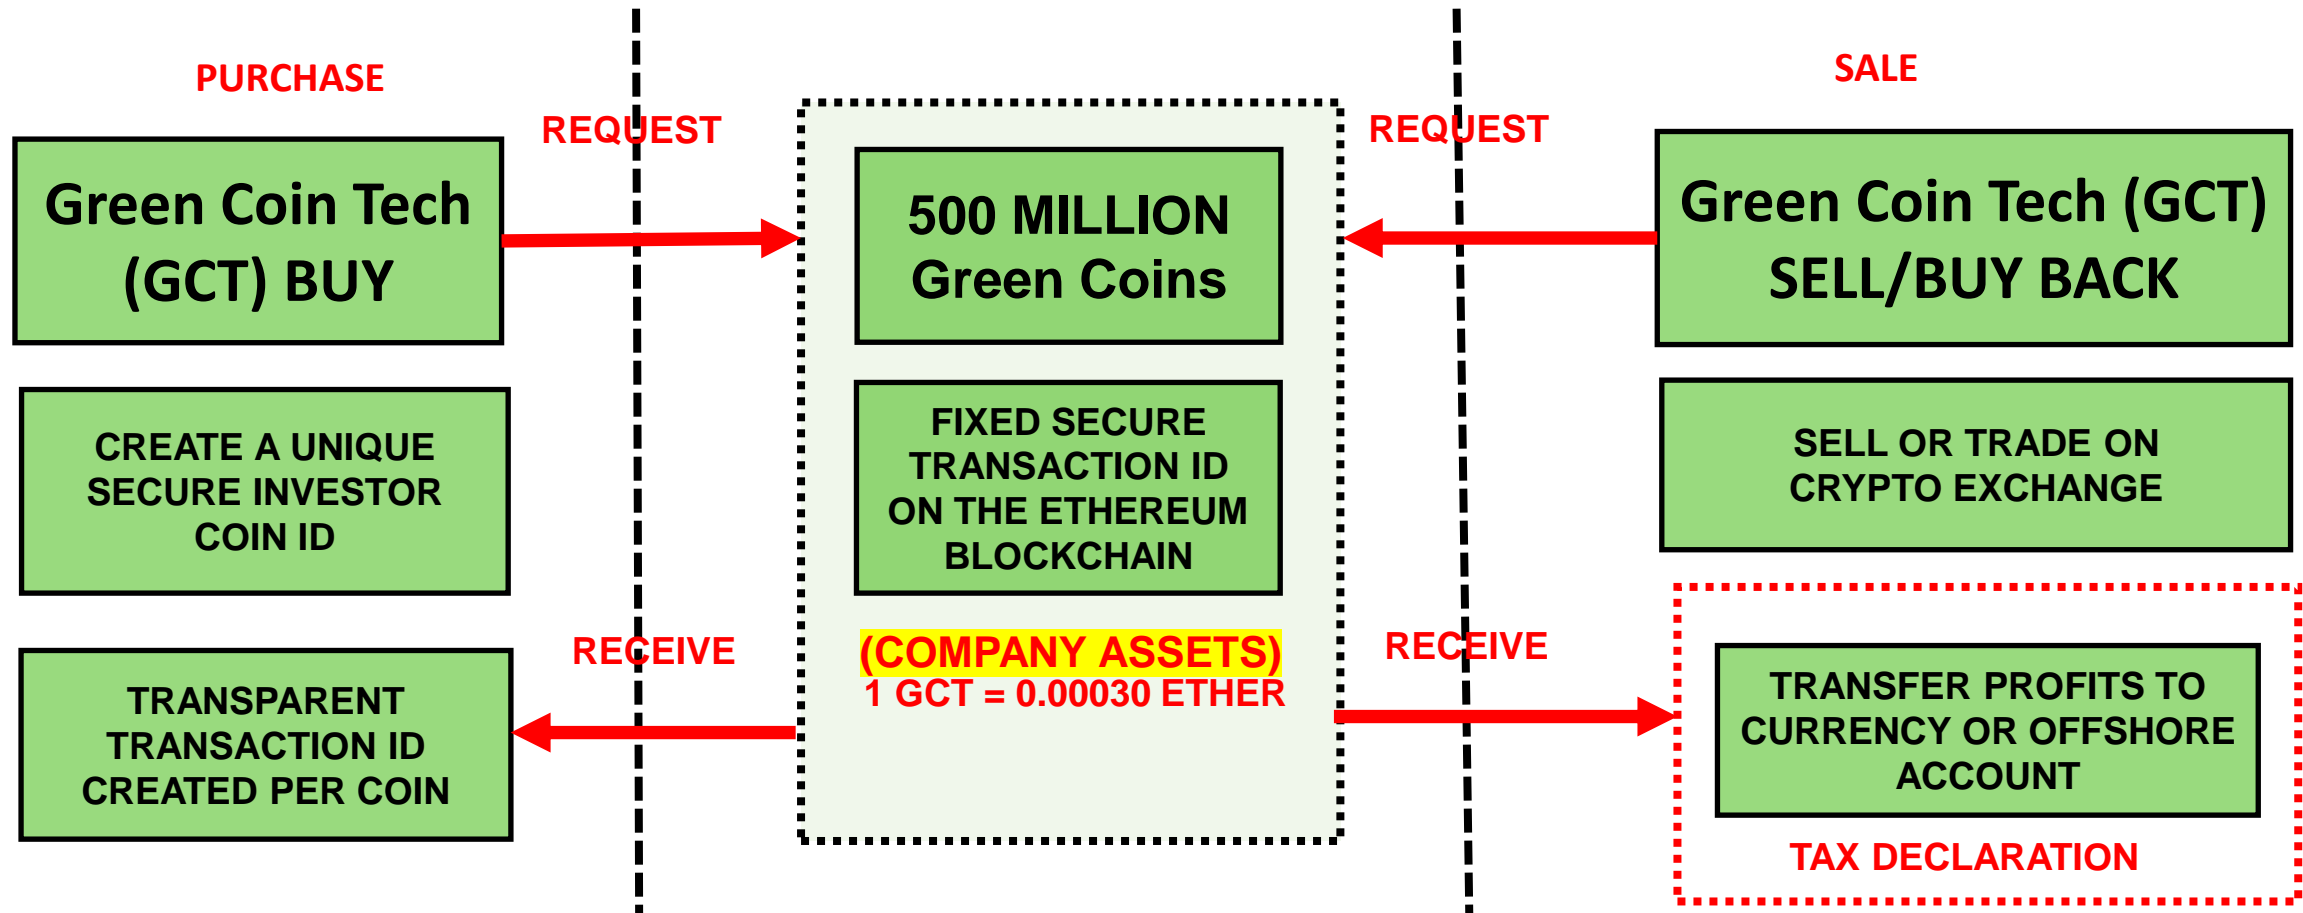

These projects align with our commitment to sustainability, resource efficiency, and environmental restoration, creating value for investors and communities alike.
